The Challenge

Can You Prove Your AI Is Governed Responsibly?

Be ready to demonstrate that your AI is governed, compliant and effectively managed.

The EU AI Act is in force. On 21 July 2026 the Regulation of Artificial Intelligence Act 2026 was signed into law, establishing Ireland's AI Office as the national coordinating body and single point of contact for the Act. It coordinates sectoral regulators rather than replacing them, so existing expectations in life sciences and the direction of the EU AI Act are converging.

For life sciences the practical question is rarely whether something counts as AI. It is what regulated process, record or decision the system affects, and whether the organisation can demonstrate appropriate control, human accountability and evidence. Detailed sectoral guidance is still to come. The question that matters now is whether you could evidence your AI governance position if you were asked today, by a regulator, a client quality function or your board.

Most organisations are not ready for that level of scrutiny.

What We do ...

Think of us as the pre-NCT check for AI Governance. We find what would not hold up, while there is time to put it right. We show you where your position is, build the capability behind it, and leave you with the evidence to support it. Governance structures, workforce competence and an evidence file, mapped to the EU AI Act and your GxP obligations.

We do not compete with your technology suppliers or transformation partners. We provide the governance layer that sits across their work.

How we work with you

Three clearly scoped steps. You commit only to the next one.

1

Governance Diagnostic:

A multidisciplinary workshop that maps your current position across five governance dimensions, producing a detailed report with a compliance checklist and an evidence framework.

2

AI Governance Enablement Programme:

CPD accredited, and proportionate to the roles and responsibilities involved. Not general AI literacy - governance specific enablement for regulated environments.

3

Evidence and Assurance:

Step by step support to work through the compliance checklist, build tracking mechanisms and establish the documentation that lets you produce evidence when required.

Why us

We speak your language because we have worked in life sciences

- **Industry experience.** The Institute is built on experience in pharmaceutical manufacturing across engineering, operational leadership and commercial expertise.
- **Governance led.** We focus exclusively on governance, compliance and responsible AI adoption. We are not a technology vendor.
- **Evidence-led:** Every engagement is designed around one question: can this organisation demonstrate compliance if an inspector asks?
- **Low risk entry.** Defined scope, clear deliverables, a set timeline. Every step earns the next. On site or remote, whichever suits your operation.
- **Recognised standing.** Members of the EU Apply AI Alliance, IAPP, ISPE and TIA.AIGP and PMP certified.

Call To Action

Start with a focused AI governance discussion

What AI tools are in use, what governance exists and where the gaps are and which of them matter first.
